U.S. COURT OF APPEALS FOR THE SECOND CIRCUIT

In the Matter of:

-----X

GROCERY MANUFACTURERS :

ASSOCIATION, et al., :

Plaintiffs-Appellants, : Case No. 15-

v. : 1504-cv

WILLIAM H. SORRELL, et al., :

Defendants-Appellees. :

-----X

Thursday, October 8, 2015

New York, New York

Proceedings before Judges Gerard E.
Lynch, Susan L. Carney, and Barrington D. Parker.

1 P R O C E E D I N G S

2 JUDGE LYNCH: Okay. We'll now hear
3 Grocery Manufacturers v. Sorrell.

4 MS. STETSON: Thank you, Your Honors.

5 And may it please the court, my name is
6 Cate Stetson. I represent the appellants.

7 This case is a First Amendment compelled
8 commercial speech challenge to a mandatory state
9 labeling law. Now, normally, when a court
10 confronts a commercial speech case, it has to --
11 as this court said a few years ago in Hayes, it
12 has to do a little bit of an archeological dig.
13 It has to go back into past compelled commercial
14 speech cases. It has to extrapolate from them.
15 It has to sometimes harmonize between them.

16 This case actually is one of those rare
17 situations where you don't need to do that because
18 there is a case that we say is directly on point,
19 and that's the Amestoy case from 20 years ago. In
20 Amestoy, Vermont passed a mandatory labeling law
21 requiring the labeling of milk that had come from
22 cows treated with a genetically engineered

1 product.

2 JUDGE LYNCH: So we can disregard the
3 mercury case and the calorie-counting case? We
4 don't have to harmonize those because Amestoy
5 controls?

6 MS. STETSON: I don't think you do need
7 to -- I don't think there's any harmonizing to do,
8 Your Honor, precisely for the reasons that the
9 panels in NEMA and the Restaurant Association case
10 said, which was that Amestoy was limited to a
11 particular set of facts. Those facts are quite
12 different from the facts in the mercury case,
13 where you had a situation where there was harm to
14 the environment that was being forestalled in part
15 by mercury disposal regulation.

16 You had a situation in the calorie-count
17 case where there was a proven harm to health and
18 safety that flowed from excess calories, and so
19 New York did something about it. But the point is
20 in both of those cases, you had panels saying
21 Amestoy is different because in Amestoy what you
22 had is a situation where a state passed a law in

1 order, essentially, just to inform consumers. Now

2 --

3 JUDGE CARNEY: But you had a state
4 concession that that was the sole purpose, and
5 that's what the decision turned on. Whereas here,
6 you have state purpose statements that concern
7 public health, environmental impacts, consumer
8 confusion, and religious practices. And the state
9 is taking a quite different position here than
10 they did in Amestoy, aren't they?

11 MS. STETSON: I was with you right up
12 until you said the state was taking a different
13 position here. I think, Judge Carney, you're
14 right that the state legislature essentially
15 papered the record a little bit more than it did
16 in the Amestoy case.

17 However, it --

18 JUDGE LYNCH: Isn't that what we ask
19 them to do? I mean, you say papered the record.
20 I think in your brief you say it's they're trying
21 to work around Amestoy, but isn't that what
22 legislature is supposed to do?

1 We tell them, "You can't do this," and
2 they say, "Oh, well, I guess we'll try to do
3 that." And then we have to try to decide whether
4 what they've done is effective.

5 MS. STETSON: Absolutely.

6 JUDGE LYNCH: So you can't -- I mean, I
7 don't want to -- I understand your point about
8 Amestoy. I understand that it's a very similar
9 kind of law and a very similar case, and it's a
10 case that has significant implications here. But
11 I'm not sure you can just -- don't we have to get
12 into the question of has their what you call
13 "record papering" worked?

14 That is, do they cite real evidence, or
15 is this just a case of totally bogus junk science?
16 Don't we have to address that at some level?

17 MS. STETSON: Judge Lynch, I'm not sure
18 that you do. And I think that should be a
19 reassurance to you all. I don't think that we
20 have to conduct, as I've said before in other
21 contexts, the Scopes trial on whether genetically
22 engineered foods are good or bad.

1 Here is the point, Judge Carney. The
2 point is when the Vermont legislature went back
3 and tried to create a record on genetically
4 engineered foods, what it said in its findings and
5 what it said in its statement of purpose was
6 something that stopped short of a finding or a
7 statement of state purpose. What it said is --
8 and this is critical, I think -- that there is a
9 lack of consensus as to the health or safety of
10 genetically engineered foods.

11 JUDGE CARNEY: Why --

12 MS. STETSON: Now match that --

13 JUDGE CARNEY: Why isn't a concern about
14 a risk enough? Why does there have to be an
15 established risk to bring this outside of Amestoy
16 and to go beyond what, again, the state conceded
17 there was mere consumer interest?

18 This is an interest that's been
19 expressed by many people and that has many
20 different ramifications, from a biodiversity
21 perspective, from a health perspective. And why
22 isn't the state entitled to inform its consumers

1 and its citizens about the presence of genetic
2 engineering on these products? Why isn't that
3 different?

4 MS. STETSON: Judge Carney, it's not
5 different at all from Amestoy, and this is why.
6 If you go back into the briefing in Amestoy -- and
7 somewhere in this building, it exists because we
8 found it -- what you will find is that the state,
9 in its brief, articulated on the first dozen or so
10 pages of its brief consumer concern 24 times, I
11 counted. Twenty-four times did it say consumer
12 concern about health and safety relating to rBST.

13 JUDGE LYNCH: But consumer concern is
14 different than scientist concern.

15 MS. STETSON: It is.

16 JUDGE LYNCH: If you have a bunch of
17 ignorant people, and these ignorant people, by the
18 way, are the voters and the consumers that you're
19 trying to not tell what you're actually putting in
20 their food. But let's consider them just a bunch
21 of ignoramuses. I can -- you know, it's far from
22 reassuring me. You're worrying me, frankly,

1 because I thought you guys would welcome the
2 argument that this is all a bunch of nonsense that
3 they're talking about, that there is no scientific
4 basis for this law.

5 But now you're trying to tell me I don't
6 have to decide whether there is no scientific
7 basis. You're sort of running from that fight and
8 telling me instead because the legislature didn't
9 use the word "finding" or because it said we find,
10 in effect, there are risks and uncertainties.
11 That may be a fully supported, sensible thing, but
12 we should, just because they used the word "risk"
13 instead of "finding," you automatically win.

14 That doesn't make me comfortable.

15 MS. STETSON: So a few things, Judge
16 Lynch. First of all, I'm running from nothing.
17 I'm more than happy to engage in the scientific
18 debate.

19 My point was that I don't think, under
20 the commercial speech context, under Amestoy or
21 really under any of the cases that we can talk
22 about, is it necessary. My point is, when it

1 comes to what the state has articulated its
2 interest to be, the state has not taken a stand.

3 What the state has said is there is --

4 JUDGE LYNCH: But why do they have to
5 take a stand? Or why haven't -- put it another
6 way -- they taken a stand? The stand is that the
7 scientific evidence gives us concerns that there
8 are risks, and therefore, we want to deal with
9 that situation.

10 If there is no scientific basis for
11 saying there's any risk, that's a different
12 situation.

13 MS. STETSON: So I'd like to make two
14 points in response. The first is to tell you
15 exactly what the state and its many various heads
16 have said about these risks. The cosponsor of the
17 bill said that the legislature couldn't
18 demonstrate any health effects. The governor
19 said, "I'm not saying whether GMOs are good or
20 bad."

21 The state below said we're just saying
22 there's uncertainty. The Vermont Assistant AG to

1 Congress, when asked whether he had any evidence
2 of risks to health or safety -- this was in June,
3 by the way -- said, "I have no evidence."

4 I agree about the scientific consensus,
5 but here is my second point. When we are talking
6 about risks or potential risks, which is actually
7 the phrase in the statute, Judge Lynch --

8 JUDGE LYNCH: Aren't risks always
9 potential?

10 MS. STETSON: No, they are not. Risk
11 sometimes -- there is a risk of cancer you get
12 from smoking. That's a proven risk. What we're
13 talking about here is a speculative potentiality,
14 which leads us right into the decision in Hayes,
15 where this court actually in a compelled
16 disclosure case said before we allow the state --
17 and with respect, this is not a situation where
18 the voters get to dictate things.

19 Before we allow the state to impinge
20 upon a commercial free speech right, we have to
21 show actual and material harm. The state has to
22 show actual and material harm.

1 JUDGE LYNCH: Well, isn't that -- isn't
2 that different where all -- under Zauderer, where
3 all that's happening is a factual disclosure, as
4 opposed to compelling some warning, for example?

5 MS. STETSON: No, I don't think it's
6 different under Zauderer at all. And just to be
7 clear, the path that we're moving down, if you
8 disagree that Amestoy controls, then we get into
9 the question whether Central Hudson or Zauderer
10 applies.

11 JUDGE CARNEY: I do want to point out as
12 to Amestoy, our holding, what we stated was we
13 hold that consumer curiosity alone is not a strong
14 enough state interest, as I'm sure you know. And
15 regardless of what may have been briefed, that was
16 what we focused on in our holding. And I'm still
17 having difficulty understanding why the concerns
18 expressed about potential risks don't bring this
19 outside of the ambit of Amestoy.

20 MS. STETSON: The only response I would
21 make, Judge Carney, again is that there are
22 hundreds of pages of affidavits in the Amestoy

1 case pointing out concerns about risks of rBST.

2 But to Judge Lynch's question about
3 Zauderer, if we are going to move off of Amestoy
4 and over to Zauderer, you have two questions to
5 confront. The first is one that this panel may
6 not conclude that it's able to address, which is
7 does Zauderer extend beyond protecting against
8 deception?

9 I understand that this court, panels of
10 this court have ruled to the contrary. The
11 Supreme Court has come down since then, though, in
12 the opposite direction. So I'll just preserve
13 that point.

14 But with respect to your question, Judge
15 Lynch, about statements of fact. And if I may
16 continue, I know my light is on.

17 JUDGE LYNCH: Okay, you can have some
18 more time.

19 MS. STETSON: With respect to your
20 question about statements of fact, Zauderer and
21 Hurley and a number of other cases, including this
22 court's decision in Evergeen, make the point

1 repeatedly that it's not just about a statement of
2 fact, it's about a factual and uncontroversial
3 statement.

4 And here is where things get interesting
5 when it comes to labeling because with respect to
6 labeling, the controversy that we're talking about
7 and the reason that this has produced, as I'm sure
8 this court knows, intense controversy is precisely
9 because there is a dispute about whether that
10 information should go on a label. There is a camp
11 of opinion --

12 JUDGE LYNCH: But see, that strikes me
13 as peculiar. The question is whether -- there's
14 always a controversy. I mean, in Zauderer, the
15 disciplined lawyer argued very strenuously, and I
16 think fairly reasonably, that this shouldn't be
17 put in his ad, that fees are an exception to the
18 fact -- that expenses are different than legal
19 fees when the ad is saying you don't have to pay a
20 legal fee.

21 And so it was controversial whether that
22 should be put in the ad, but that's not -- the

1 fact is a simple fact --

2 MS. STETSON: Right. Judge Lynch --

3 JUDGE LYNCH: -- that you will have to
4 pay his expenses.

5 MS. STETSON: I don't think we're
6 talking here about a case or controversy. I think
7 what we're talking about in Zauderer and Evergreen
8 -- take Evergreen, that's the best example -- is a
9 situation where a statement of fact, nevertheless,
10 is controversial.

11 And here, I think the problem is more --

12 JUDGE LYNCH: But that was freedom of
13 speech, wasn't it? I mean, pregnancy services
14 company or entity in that case, its whole point
15 was to not talk abortion. That was its whole
16 reason for existence was come talk to us about
17 pregnancy, and we're going to, in effect, tell you
18 about how you can safely have a baby and adoption
19 services and all this other stuff. They don't
20 want to say the word "abortion" at all for
21 political and moral reasons.

22 That's not -- that's not quite what's

1 going on here. Here you've got a sort of factual
2 disclosure.

3 Now let me try and get to what I think
4 are some serious issues in this case that might
5 help you out because I don't think you've been
6 helping me help you so far.

7 I think one issue that is relevant. Do
8 you know what "clear and conspicuous" means in
9 this statute? Is there any guidance from
10 regulation or legislative history or what you
11 think you'd have to do if this law is upheld to
12 make a clear and conspicuous statement?

13 MS. STETSON: There is some guidance, I
14 think, in the form of the regulations on what it
15 means. I mean, I take your point because that was
16 also an issue in Hayes and ended up -- ended up
17 being a point of -- a partial point of the
18 reversal in Hayes. That's not been a focus of the
19 party's briefing until now.

20 JUDGE LYNCH: I know it hasn't. But you
21 see, what I'm getting at here -- and let me just
22 lay out a thought, and I'm going to ask the other

1 side about this, too. It seems to me there's
2 nothing particularly controversial about the fact
3 that a product contains Red Dye No. 2. That's a
4 fact. If it has it in, it goes in the ingredient
5 list. It's in fine print. It's on the back.

6 Somebody, some consumer who, for
7 whatever good or bad reason, doesn't want to eat
8 something with Red Dye No. 2 can find it.

9 It seems to me it would be quite
10 different if a legislature said if you have Red
11 Dye No. 2 in your product, you have to put on the
12 front of the box in big letters "contains Red Dye
13 No. 2," because that starts to sound like a
14 warning, and that -- I take it if they said,
15 "Warning: Red Dye No. 2. This is dangerous to
16 your health," that's a controversial statement.

17 But just having it in the ingredient
18 list somewhere is not a big deal. And I'm trying
19 to figure out where clear and conspicuous is in
20 the spectrum --

21 MS. STETSON: Right.

22 JUDGE LYNCH: -- between it's got to be

1 legible. You can't put it in print that's so
2 small that no one can find it. And it has to be,
3 as the calories was, as big as the name of the
4 product and/or the price, which seems to me like a
5 bigger deal about -- about that kind of
6 disclosure.

7 MS. STETSON: Right.

8 JUDGE LYNCH: What do you think the
9 answer is, or do we know what the answer is?

10 MS. STETSON: The answer is this falls
11 into the bigger deal category, Judge Lynch.

12 JUDGE LYNCH: Mm-hmm. Well, where?
13 Tell me why. What do you have to do, and where
14 does it say what you have to do be clear and
15 conspicuous?

16 MS. STETSON: For a couple different
17 reasons. The first is Vermont understood that it
18 was actually not in a position simply to require a
19 modification to the small ingredient list on the
20 back because that actually runs it right into
21 significant federal preemption issues.

22 JUDGE LYNCH: Okay. So let me --

1 MS. STETSON: So what it says is --

2 JUDGE LYNCH: -- be very precise.

3 Suppose you decided to try to comply with this law
4 by putting underneath, not as part of -- because
5 you can't touch what the FDA requires. But sort
6 of right underneath it, in the same size print as
7 the other ingredients, in the same size as the
8 little thing that says "may contain peanuts,"
9 "contains genetically modified food products."

10 Would you be in violation of the
11 statute, as you understand it?

12 MS. STETSON: If it's in the same size
13 as everything else? But let me -- before we --

14 JUDGE LYNCH: Same size as the other
15 ingredients, yeah.

16 MS. STETSON: I'm going to -- I'm going
17 to reserve the answer until I tell you what is
18 required by Vermont.

19 JUDGE LYNCH: Okay.

20 MS. STETSON: And then we can discuss
21 it. Clear and conspicuous means presented in such
22 a manner, given its font, size, color, contrast,

1 and proximity to other disclosures on the shelf,
2 bin, container, or package, as to be readily
3 noticed and understood by customers.

4 JUDGE LYNCH: Right.

5 MS. STETSON: So that's what -- and it's
6 that last phrase that I think puts this much more
7 in your warning light --

8 JUDGE CARNEY: But that puts it on a par
9 --

10 JUDGE LYNCH: Well, but answer the
11 question then specifically, which you were going
12 to get to, if you did that, would that be good
13 enough, in your view, to satisfy the statute?

14 MS. STETSON: I think -- I think the
15 state could come back and say that you haven't
16 sufficiently made it clear and conspicuous enough
17 so as to be readily noticed and understood.

18 JUDGE LYNCH: Well, but, see, if I have
19 an allergy to peanuts that could kill me, usually
20 I have to look in exactly that place and exactly
21 that size. I mean, it would be very interesting
22 if they're requiring for this perhaps less

1 established risk a warning that is more dramatic
2 than warnings about things that it's a scientific
3 fact can kill certain people.

4 But you know, if I'm worried about
5 peanuts, I know where to look. I look, and it's
6 readily apparent once I see that legend, even
7 though it's in the same size print as Red Dye No.
8 2 and other small things.

9 So, but you're saying you think you have
10 a significant -- significant basis for thinking
11 that wouldn't be good enough under this statute?

12 MS. STETSON: I do. And more to the
13 point, Your Honor, one of the complexities of
14 this, I think, that should be resolved in our
15 favor is because of the conversation we're having,
16 because of the fact that when something goes on a
17 label, it is taken to mean something. People look
18 for the peanut, the warning "contains peanuts,"
19 "may have been produced in a factory using tree
20 nuts," all of those variations. They look for it
21 because it matters to them, because it's
22 significant.

1 So that the mere fact that the state is
2 mandating that this go on a label is essentially
3 joined in the camp of opinion that says this
4 matters.

5 JUDGE LYNCH: But aren't there a lot of
6 --

7 MS. STETSON: There is a --

8 JUDGE LYNCH: Excuse me. Aren't there a
9 lot of things on that label that do not smack at
10 all of warning? What percent -- just like the FDA
11 requires, what percentage of your minimum daily
12 requirement of Vitamin A does this give you?

13 I don't say, "Oh, my God, you know,
14 that's got 15 percent of my minimum daily
15 requirement of Vitamin A. I'm not going to buy
16 this."

17 MS. STETSON: Of course, you don't.

18 JUDGE LYNCH: It's information.

19 MS. STETSON: Of course, you don't.

20 It's information, though, that has value to the
21 consumer. And our point is before the state can
22 impinge on a company's First Amendment right not

1 to say something, it needs to show that there is a
2 reason, what the value is that's being assigned.

3 And with respect, it cannot just be that
4 there might be a risk in the air, unproven by any
5 national --

6 JUDGE LYNCH: Does that require -- this
7 pen has, in letters that I can -- am too old to
8 read, but I'm told it says "Japan." Could
9 Congress require country of origin designations on
10 all products?

11 MS. STETSON: I think that is an
12 interesting question after the American Meat
13 Institute case. But the problem with the country
14 of origin labeling analogy is that it quickly
15 devolves into the statement that sometimes you
16 find, which is everybody requires labels on
17 everything. So what's the big deal about another,
18 you know, statement?

19 The big deal is that before a state can
20 require this statement, it needs to back it up.
21 It needs to show a material --

22 JUDGE LYNCH: So the answer is no? Your

1 answer is no because there'd be nothing to back
2 up. It's just my curiosity. I either like pens
3 made in Japan or I don't. I want to buy American,
4 and so I won't buy this one. I'll buy one that
5 says "made in USA." Pure consumer curiosity.

6 I can't think of a reason -- the meat
7 thing, there may even be a better reason, I don't
8 know.

9 MS. STETSON: No, but the --

10 JUDGE LYNCH: But on just every product,
11 just put where it comes from?

12 MS. STETSON: The same -- the same
13 motivation would apply in your hypothetical as the
14 D.C. Circuit found applied in AMI. The reason I
15 said it's an interesting question is because that
16 case, of course, is about to prompt a trade war.
17 But, yes, the D.C. Circuit said when it comes to
18 buying American, that is a substantial state
19 interest.

20 But here you have a situation where, and
21 respectfully, I have to put a marker down on this,
22 there is no scientific body that is credited in

1 this country that has stated that there is any
2 risk to anyone or any animal from any GMO, full
3 stop. That's my scientific argument.

4 But with response -- with respect to the
5 First Amendment, Your Honor, before a statement
6 goes on a label, particularly when its presence on
7 the label is the source of the controversy, that
8 is exactly what puts us, even if we are separate
9 somehow from Amestoy --

10 JUDGE CARNEY: Well, that's actually a
11 nice segue into the second part of the case about
12 the use of the word "natural," in which you
13 successfully challenge the state's efforts to
14 prevent you from using "natural" on genetically
15 engineered products. And which is kind of
16 interesting itself, but so you can continue to use
17 "natural" on labels as much as you would like.

18 But notwithstanding your win in the
19 District Court on this, the District Court
20 declined to enter a preliminary injunction in your
21 favor. Could you -- I understood your argument to
22 be primarily that this concerns the First

1 Amendment. Therefore, we presume irreparable
2 harm. We don't have to make any showing.

3 Is there more than that? Have you made
4 much of a showing of what costs are going to be
5 put to or have been put to already? Could you
6 speak to that?

7 MS. STETSON: I can, Judge Carney. But
8 first, let me pause on the First Amendment point
9 because you're exactly right. We did win on the
10 "natural" ban in the District Court. The court
11 stopped short of granting the PI because she found
12 that we hadn't been sufficiently specific enough
13 about what harms would befall what manufacturers
14 if she were not to enter the injunction as against
15 the "natural" ban.

16 The problem with that is, of course,
17 twofold. The first is we have plenty of
18 declarations, and I'd point you in particular to
19 Bradley and Hermansky.

20 JUDGE CARNEY: But they mostly seem to
21 do with conducting inventory. "We have to review
22 our inventory." "We might have to change a

1 label." But they were very inspecific --

2 MS. STETSON: Oh, no. I disagree, Your
3 Honor. If you look at paragraph 11 of the Bradley
4 declaration, you look at paragraph 15 of
5 Hermansky, what you will find is that both of
6 those say we make products that are subject to
7 both prongs of this law, the ban and the
8 compulsion.

9 It's not just a question of looking at
10 inventory --

11 JUDGE CARNEY: They're very generic.
12 But they were very generic.

13 MS. STETSON: Of course, they were.
14 Precisely for the reason we won below, which is
15 that it wasn't possible for us to figure out what
16 products were and were not within the scope of the
17 ban.

18 JUDGE LYNCH: They may be -- they may be
19 saying we make products that are subject to the
20 "natural" ban. But I would have thought, having
21 gotten reversed once by the Supreme Court on a
22 standing ground, that in order to challenge that

1 law, you'd have to say more than just we make a
2 product, that because it contains genetically
3 modified ingredients would be subject to the ban
4 on using the word "natural."

5 I should think you'd have to say "and we
6 either have advertised it as all natural or we
7 plan to advertise it as all natural," you know?
8 Not just that your First Amendment rights are
9 theoretically abridged, right? I mean, I don't
10 know that I get to come in and challenge a
11 regulation that says you can't wear on the back of
12 a judicial robe a slogan that says "F the draft"
13 without saying "I'd like to do that."

14 I might be offended that somebody is
15 telling me what I can put on my robe. But unless
16 I have concrete plans to do it or have done it,
17 where do I get the standing to challenge -- and
18 here when I am talking about standing, we're
19 talking about the further thing of get a
20 preliminary injunction --

21 MS. STETSON: Right.

22 JUDGE LYNCH: -- to stop this law in its

1 tracks because it prevents me from doing something
2 that maybe I might someday conceivably want to do.

3 MS. STETSON: I think the declarations
4 are far more forceful than that, Judge Lynch, is
5 the answer.

6 And first of all, you're right that
7 we're not talking about standing. The District
8 Court had no trouble finding standing on any point
9 here. What we're talking about is the
10 availability of injunctive relief, as against
11 these industry plaintiffs who have members who are
12 subject to the "natural" ban, full stop. We say
13 that they're going to be affected by both prongs
14 of this.

15 And then, Judge Carney, to your point,
16 we say in order for us even to figure out which of
17 these products is going to be subject to the
18 "natural" ban, not just what we use in terms of
19 the words, but what it contains, what ingredients
20 are we talking about. Are we talking about corn,
21 soy, sugar, all of which are predominantly
22 genetically engineered at this point? How are we

1 going to figure out from our suppliers whether
2 they source us only with GE or not with GE or
3 something mixed up in between? All of those --

4 JUDGE LYNCH: That's just money. Yeah.

5 JUDGE PARKER: Can we hear from
6 appellees?

7 JUDGE LYNCH: All right. I guess --

8 MS. STETSON: One last point. It's not
9 just money when you're talking about suppliers who
10 have declared, as Richard Michaud did, that he's
11 going to lose his job if the supply chain into
12 Vermont stops, and that's a possibility.

13 Thank you.

14 MR. ROBBINS: May it please the court,
15 I'm Larry Robbins, representing appellees.

16 Judge Lynch, I'd like to start with the
17 clear and conspicuous question that you posed to
18 Ms. Stetson. The attorney general has defined
19 that term. It is the very first definition in CP
20 Rule 121. Let me read the entire definition
21 because I think it disposes of the question.

22 "Clear and conspicuous means presented

1 in such a manner, given its font, size, color,
2 contrast, and proximity to other disclosures on
3 the shelf, bin, container, or package, as to be
4 readily noticed and understood by consumers. A
5 disclosure is not clear and conspicuous if, among
6 other things, it is obscured by the background
7 against which it appears."

8 So this is not a case, which like, for
9 example, the D.C. Circuit's decision involving
10 tobacco disclosures, where there was a required
11 illustration of somebody smoking out of a
12 tracheotomy hole. This is a case where you simply
13 have to put it on the label in a way that doesn't
14 obscure it. It has to be visible to consumers,
15 which is, of course, the very purpose that --

16 JUDGE LYNCH: There's nothing that says
17 it has to be of a certain font or size or as big
18 as anything else on the label?

19 MR. ROBBINS: No, there is not. Let me
20 dispose of a couple of other propositions that Ms.
21 Stetson said about the statute, which I think can
22 also be disposed of just by looking at the statute

1 itself.

2 First of all, there is the contention
3 that somehow the State of Vermont was agnostic
4 about whether there was a risk or not, and it
5 just, in a sense, threw up its hands. No, that is
6 not true.

7 The State of Vermont in its findings,
8 never mind what people said on the floor or in
9 debates or in cloakrooms, what they put in the
10 statute in a finding was, among other things, that
11 it is in the interest of the state, according to
12 Subsection 6, in order to serve the interests of
13 the state, notwithstanding limited exceptions, to
14 prevent inadvertent consumer deception, prevent
15 potential risks to human health, protect religious
16 practices, and protect the environment.

17 Nor were they agnostic about whether
18 these risks were real. They said, among other
19 things, that the use of genetic engineered crops
20 is increasing in commodity agricultural production
21 practices, which contribute to genetic
22 homogeneity, loss of biodiversity, increased

1 vulnerability of crops to pests, diseases, and
2 variable climate conditions. That was a finding
3 in the statute itself.

4 This is not a case, in short, anything
5 remotely like Amestoy. This court has understood
6 Amestoy to be confined to the circumstance in
7 which the statute had no purpose other than to
8 sate consumer curiosity alone, as Judge Carney
9 pointed out in one of her questions. And this
10 court has said that three times in confining the
11 scope of the Amestoy decision.

12 It said in it in NYSMA. It's in NYSRA.
13 It said it in NEMA, and it said it again in
14 Connecticut Bar. This case is not controlled.
15 Indeed, it's nothing like the Amestoy decision.
16 That, I respectfully suggest, is a red herring.

17 The suggestion that what the legislature
18 did here is simply to paper the record I think is
19 deeply unfair to what actually happened in this
20 case. There were hearings over a two-year period
21 of time, countless committee hearings, countless
22 presentations, some 52 committee hearings, 136

1 presentations of testimony on both sides of the
2 issue.

3 And the materials in front of the
4 legislature are anything but junk science. And I
5 want to go back, Judge Lynch, to the question that
6 you posed because I actually share Ms. Stetson's
7 assertion that this court is not called upon under
8 Zauderer to analyze the question of the validity
9 of the science.

10 I think instead what you're called upon
11 under Zauderer -- and Zauderer does manifestly
12 control this case. What you're called upon to do
13 is to satisfy yourself that the state legislature
14 had legitimate purposes for which this legislation
15 is rationally related.

16 And in discharging that function, in
17 this court's Zauderer cases -- in the mercury
18 case, in the calorie-counting case, in the
19 Connecticut Bar case -- in discharging the
20 rational basis review standard, what the court has
21 done is first identify the state interest.

22 Here, the interests -- I'm sorry, Your

1 Honor?

2 JUDGE LYNCH: At what level of
3 generality? Because the state can say we have an
4 interest in health and the environment, and I say
5 that's substantial. Those are the most important
6 things that exist for people.

7 MR. ROBBINS: Yes.

8 JUDGE LYNCH: But is all of the question
9 about whether there actually is any danger to
10 health or the environment subsumed into the
11 rational fit --

12 MR. ROBBINS: Yes.

13 JUDGE LYNCH: -- and we just say that's
14 a substantial -- okay.

15 MR. ROBBINS: Yes.

16 JUDGE LYNCH: But then, so you're saying
17 all I have to do is invoke health and the
18 environment. Now I've got a substantial interest,
19 and then the court has to defer to the
20 legislature's judgment about whether there's a
21 rational fit so we all go home?

22 MR. ROBBINS: Well, I don't know about

1 the "all go home" part.

2 JUDGE LYNCH: Well, let me --

3 MR. ROBBINS: But let me -- but let me -

4 -

5 JUDGE LYNCH: I'll try to be a little
6 more concrete then. There were some references
7 during the discussion with Ms. Stetson as to what
8 her side won and lost in the District Court. But
9 as I understand the procedural posture here, we're
10 only talking about preliminary injunctions. We're
11 talking about predicting likelihood of success on
12 the merits.

13 MR. ROBBINS: Yes.

14 JUDGE LYNCH: So with respect to the
15 First Amendment objection to the labeling
16 requirement, that claim was not dismissed by the
17 District Court, right?

18 MR. ROBBINS: That's correct. It was --

19 JUDGE LYNCH: That's still in the case,
20 and there's going to be further proceedings,
21 summary judgment, trial on that perhaps?

22 MR. ROBBINS: Indeed.

1 JUDGE LYNCH: And with respect to the
2 "natural" prohibition, they didn't win. The judge
3 just predicted they were likely to win and then
4 declined to grant a preliminary injunction on
5 other grounds. That also remains in the case.

6 MR. ROBBINS: Indeed.

7 JUDGE LYNCH: So I'm trying to figure
8 out what the trial looks like in this case. If
9 it's not going to be the Scopes trial about GMO
10 products because you're going to say we've got
11 weighty interests, and she's going to say nobody
12 has -- you know, no reputable scientist believes
13 what you say, or something like that, is that what
14 the trial is going to be about?

15 Because so far, we've got pretty
16 conclusory stuff in the briefs, where, especially
17 on their side, nobody -- nobody believes this.

18 MR. ROBBINS: Well --

19 JUDGE LYNCH: But is the District Court
20 going to have a trial about that?

21 MR. ROBBINS: Well, let me answer it in
22 two parts. But first of all, I want to talk about

1 the premise of Your Honor's question because when
2 they say, when the plaintiffs say no reputable
3 science believes X or Y, let's be clear about what
4 they are saying that about.

5 What they are saying that about is the
6 goal of protecting human health. They are not
7 saying that about the environmental concerns.
8 That contention is conspicuously missing in their
9 opening brief, and it's not surprising because
10 there is robust evidence that the proliferation of
11 glyphosate and the use of BT, the BT protein has
12 had substantial adverse effects on environment.

13 But even in the realm of human health,
14 the trial, if there is a trial on this point --
15 and respectfully, if this court holds as we ask it
16 to, that this case is controlled by Zauderer, this
17 trial will be a good deal shorter, as well it
18 should be, because this court has held repeatedly
19 that in the realm of Zauderer, the state need not
20 even have an empirical basis for its rational
21 relation. It doesn't need.

22 So Judge Raggi pointed out in her

1 opinion for the court in Connecticut Bar, it need
2 not have an empirical grounding. But in point of
3 fact, we will have and do have in this record
4 abundant empirical evidence as to every purpose
5 for this statute.

6 JUDGE PARKER: When you say "this
7 record," in this case, most -- not most, but a
8 great deal, if not most, of the important
9 information is really not in the record, it's by
10 way of assertions from amicus parties. So when
11 you look at what we're dealing with, basically,
12 we're dealing with a complaint. We're dealing
13 with motion practice addressed to defenses and so
14 forth.

15 But the meat of the case is really not
16 before us. I mean, the physicians that you have
17 gotten information from and the fact that the
18 National Academies of Science and so forth don't
19 think there's much here is not in any record. It
20 hasn't been vetted. It hasn't been reviewed by a
21 District Court.

22 MR. ROBBINS: Well, let me say it -- the

1 materials before the legislature on which the
2 legislature relied in making the findings that it
3 did are absolutely in the record. And we refer
4 the court to Exhibit J that compiled all these
5 materials in the record below.

6 And I can take the court through one
7 after another of peer-reviewed journal articles
8 supporting the findings of the legislature. But
9 in the end, I respectfully suggest that under
10 Zauderer, which, again, I believe absolutely
11 provides the standard by which the disclosure part
12 of Act 122 is governed, it is not the District
13 Court's function. And she properly regarded it as
14 not her function to assess the validity, the
15 weight.

16 You know, who has the better science?
17 Those are --

18 JUDGE PARKER: At trial, what is it
19 you're going to undertake to do?

20 MR. ROBBINS: Well, if the case -- if
21 this court holds that the GE disclosure part of
22 the statute is controlled by Zauderer, I believe

1 it will be sufficient simply to remind the court
2 that it has before it a compendium of scientific
3 material on the basis of which the legislature
4 made the findings that it did.

5 That, I think, actually sets the bar
6 higher than Zauderer requires.

7 JUDGE LYNCH: But what about the
8 question of fit, of whether this is going to help
9 with those environmental concerns? I mean, it
10 seems to me if there were a human health concern,
11 then one might say, as with cigarettes, look, the
12 stuff is legal. It's up to people to decide. And
13 you know, if we can put this warning on, that'll
14 help because people will see it and they'll decide
15 what to do about it, and there will be less
16 consumption.

17 When we're talking about these
18 environmental risks, first of all, it sounds like
19 they're sort of second-order risks. That is, it's
20 not that the genetically modified wheat is causing
21 some harm in itself, it's that that enables the
22 farmers to use more of particular pesticides,

1 which are carcinogenic and which then get into the
2 environment. And that's bad.

3 And that's going to get stopped because
4 in one, with all respect, relatively small state,
5 some consumers are going to say we're going to
6 look for the perhaps nonexistent, when it comes to
7 packaged foods, products that -- or very rare ones
8 that you can buy in fancy stores that say "GMO
9 certi -- non-GMO certified products," but that's
10 going to change the agribusiness model --

11 MR. ROBBINS: Well --

12 JUDGE LYNCH: -- and affect the
13 environment writ large?

14 MR. ROBBINS: Let me -- let me address
15 that at two levels. First, Judge Lynch, to the
16 extent that this statute is designed to obviate
17 consumer confusion about what they are purchasing,
18 which was one among the goals, there is an obvious
19 means and fit. I mean, itself, as the D.C.
20 Circuit put it on bank in the AMI case, it's a
21 self-evident fit between means and ends when
22 you're dealing with the goal of obviating

1 confusion.

2 But even as to the proposition that, you
3 know, the small market share in Vermont will have
4 an effect further down the line in the behavior of
5 farmers and the effect on the proliferation of
6 glyphosate, I would take the court back to what
7 you said about the mercury recycling, also a
8 Vermont case. And what the court said there in
9 the context of a Zauderer analysis was that it was
10 sufficient for means and fit that it was probable
11 -- I'm reading right from NEMA -- probable that
12 some mercury lamp purchasers, newly informed by
13 the Vermont label, will properly dispose of them
14 and thereby reduce mercury pollution.

15 Nobody contended that Vermont lamp
16 buyers had such a dramatic impact --

17 JUDGE LYNCH: Yeah, but that's going to
18 have an impact right there in Vermont probably,
19 right? It's the Vermont buyers who are going to
20 not improperly dispose of mercury in Vermont.
21 That's good for Vermont's environment.

22 The -- I don't even -- I guess somebody

1 in Vermont grows wheat, but that's not where most
2 of this stuff is coming from. So all these
3 effects, you know, on the environment are writ
4 very large.

5 MR. ROBBINS: Well, I will grant that
6 there is a chain of logic and causation, but
7 respectfully, that sort of Hall's graph analysis
8 of what causes what down the line is precisely
9 what we vouchsafe to the legislature to analyze.
10 It is not the court's function, least of all in a
11 doctrine in which this court has said repeatedly
12 the legislature does not even need empirical
13 evidence to justify the cause and effect so long
14 as the court can imagine that it had one, and it
15 surely did here.

16 That suffices under Zauderer. If we
17 were in the world of Central Hudson, which we are
18 not, I would have to make a more, let's say,
19 robust means end argument than I need to today.
20 But we are not there, and the contention that this
21 label is somehow controversial because it relates
22 to, as plaintiffs have called it, a "hotly debated

1 topic" cannot be the way to understand controversy
2 within the meaning of Zauderer.

3 If that were the case, if it were
4 sufficient to be controversial that it relates to
5 a hotly debated topic, then I respectfully suggest
6 Zauderer itself was wrongly decided because any
7 lawyer who's ever been called an ambulance chaser
8 knows perfectly well that contingent fee
9 litigation is itself controversial in that sense.

10 Now I've spent most of the time thus far
11 on the GE disclosure rule. I'd like to talk about
12 "natural" unless the court has questions?

13 JUDGE LYNCH: This is a very interesting
14 matter very important matter. I've given both
15 sides extra time. So you have some more time, but
16 let's try and focus it now on the "natural"
17 prohibition and try to be relatively brief there.

18 MR. ROBBINS: I'll do my best.

19 JUDGE LYNCH: Thank you.

20 MR. ROBBINS: So on the "natural"
21 prohibition, we make two arguments. The first is
22 that in point of fact, the "natural" pro --

1 restriction is constitutional. And in this
2 respect, we disagree with the District Court.

3 The law is settled, and I think there is
4 no disagreement about this basic principle
5 reflected in the decision of the Supreme Court in
6 Peel and other decisions that where a label is
7 either inherently or actually misleading, it may
8 be prohibited. There was before the legislature
9 survey evidence of a sort exactly of the sort that
10 one would use to determine whether there is
11 confusion.

12 A 2010 Hartman Group poll concluding
13 that some 61 percent of consumers believe that
14 "natural," the word "natural" implies the absence
15 of GE foods. There was evidence before the
16 legislature that the World Health Organization and
17 Monsanto, one of plaintiff's members, defined --
18 themselves defined GMOs as organisms that are
19 altered in a way that does not occur in nature.

20 So, in short, there was evidence both of
21 actual and inherent misleading speech.

22 What the District Court did was it said,

1 well, look, the problem here is that "natural"
2 means -- covers even more than the absence of GE.
3 The District Court thought that it lacks a settled
4 meaning because, after all, as the District Court
5 put it at Joint Appendix 88, even bordering,
6 weeding, and pruning do not exist in nature.
7 Well, that's true enough.

8 But that's the wrong question. The
9 right question is on this record, what do
10 consumers believe "natural" means, and are they
11 mis -- do they misapprehend the meaning in the
12 context of genetic engineering?

13 JUDGE PARKER: Well, and the other part
14 of that question is if I were a manufacturer, how
15 do I know what -- a food manufacturer or a
16 packager, what I can or can't put on my label?
17 And the catch-all "any words of similar import"
18 that would have a tendency to mislead would give
19 me a lot of pause.

20 MR. ROBBINS: They would until, Judge
21 Parker, that manufacturer read the attorney
22 general's rule implementing the statute, which

1 says in Definition 14, that "natural" or any words
2 of similar import means the words "nature,"
3 "natural," or "naturally," period.

4 That's what you can't say if you're
5 selling genetically engineered goods because a
6 substantial percentage of the public on this
7 record understands those particular words to
8 connote the absence of genetic engineering. And
9 if that evidence suffices --

10 JUDGE CARNEY: But it doesn't really go
11 much farther than that. I mean, "natural" is such
12 a broad and indefinite kind of word, I think, that
13 it can mean just existing in nature, in which case
14 no processed food would qualify as natural. I
15 think there's a lot of difficulty in knowing how
16 to comply with that, even with the attorney
17 general's regulations.

18 MR. ROBBINS: Well, the -- what the
19 statute says is if you are producing genetically
20 engineered food, you may not call it natural.
21 Judge Parker said, well, but it also says "words
22 of similar import." The attorney general has

1 dealt with that by confining it to particular
2 words.

3 So now manufacturers know that if their
4 food is genetically engineered, they may not call
5 it "natural." And by the way --

6 JUDGE LYNCH: But there's no other
7 prohibition on using the word "natural" that has
8 to do with the use of chemical fertilizers, for
9 example, or anything else that might conceivably
10 by some people be thought not to be natural. But
11 others might disagree, or something like that.

12 MR. ROBBINS: Yes.

13 JUDGE LYNCH: If you're talking about --

14 JUDGE CARNEY: With preservatives --

15 MR. ROBBINS: Yes, but likewise, Judge
16 Lynch, there is no evidence in this record that
17 anybody is confused about the word "natural" in
18 any other context. In other words, I understand
19 that, you know, in a platonic sense, the word
20 "natural" can mean you haven't done anything other
21 than Mother Nature itself. So you haven't
22 irrigated your farm. You haven't used a plow.

1 You know, you haven't used a rake because, you
2 know, rakes weren't in the Garden of Eden either.

3 But that's not the question. The
4 question is on this legislative record, what were
5 people actually confused about? And the record
6 shows they were confused not about any of these,
7 you know --

8 JUDGE LYNCH: Well, but they might be
9 confused about a lot of other things. The record
10 didn't -- no one inquired of them about other
11 confusions. Isn't your point just that the
12 legislature is concerned about these particular
13 things --

14 MR. ROBBINS: Yes.

15 JUDGE LYNCH: -- and that's all they
16 have to deal with?

17 MR. ROBBINS: And they don't have to
18 solve all the possible confusion at once, least of
19 all in the area of commercial speech, where the
20 courts have said you may take one step at a time.

21 But let me turn to the second --

22 JUDGE PARKER: So if I made a potato

1 chip from a GE-derived potato, I could not
2 describe it as natural?

3 MR. ROBBINS: Correct.

4 JUDGE PARKER: What if I made a potato
5 chip from a regular Idaho potato? I could
6 describe it as natural and naturally made?

7 MR. ROBBINS: If there are no -- under
8 this statute, the "natural" restriction is
9 confined to the use of genetic engineering.
10 That's correct.

11 JUDGE LYNCH: If I somehow made a potato
12 chip out of edible plastic, I could call it
13 natural as far as this --

14 MR. ROBBINS: As far as this statute is
15 concerned. But let me be clear, the questions
16 about where to divide the line, those sound like
17 equal protection arguments. And of course, if
18 they were, if they had brought like an equal
19 protection claim, you know, you're only punishing
20 GE natural abusers. You're not punishing the
21 plastic, the people who are growing potatoes -- if
22 there were a class of such people, by the way.

1 But that would be --

2 JUDGE LYNCH: But so many people are
3 growing potatoes in a manner that a lot of your
4 organic farmer amici would regard as not natural -
5 -

6 MR. ROBBINS:: Yes --

7 JUDGE LYNCH: -- and you're not going
8 after them. It's not plastic. They're a
9 realistic example.

10 MR. ROBBINS: But that's just the nature
11 of economic legislation. And time immemorial, you
12 know, ever since the demise of Lochner, it's been
13 okay to draw those kinds of lines.

14 JUDGE PARKER: So I couldn't describe my
15 potato chip from a GE-modified potato as natural,
16 but I could, you know, label my can of Spam
17 naturally made, all natural?

18 MR. ROBBINS: Something tells me Spam --
19 well, if the assumption, Judge Parker, is that
20 Spam -- there's no genetic engineered --

21 JUDGE PARKER: It's miscellaneous cow or
22 pig parts.

1 MR. ROBBINS: Yeah. As far as this
2 statute doesn't address that question. There may
3 be other statutes that do. I'm not aware of them.
4 But again, the fact that what we might think as an
5 abstract matter are comparable cases where
6 "natural" should not be used is not a burden that
7 the State of Vermont has for this kind of
8 legislation.

9 So let --

10 JUDGE CARNEY: On this aspect of the
11 case, though, do you agree that it's the Central
12 Hudson analysis that applies?

13 MR. ROBBINS: No. No, I don't.

14 JUDGE CARNEY: On Zauderer?

15 MR. ROBBINS: If the use of the label --
16 Judge Carney, if the use of the label is either
17 inherently or actually misleading, it is subject
18 to prohibition, and you do not have to reach
19 Central Hudson at all.

20 If you thought I was wrong about this
21 and that it was merely potentially misleading,
22 which is what the District Court was prepared to

1 believe, then you have a Central Hudson analysis,
2 and we've explained in our brief, and I don't want
3 to take the time now, why we satisfy that
4 standard.

5 But I do want to come back to why,
6 nevertheless, a preliminary injunction was
7 properly denied on the "natural" part of the
8 statute. And that is because you will search
9 these affidavits all day long and you will not
10 find a single averment that a single plaintiff
11 member actually plans to use the word "natural" on
12 a GE product.

13 They didn't say that. I rather suspect
14 because it leads to litigation where people bring
15 class action claims that, you know, they've been
16 using the word "natural" on GE products and they
17 get sued. So, and I understand that. They don't
18 want to get sued. So they don't want to say it.

19 But the fact is they haven't said it.
20 It was their burden to do so. And the District
21 Court, whose finding in this respect I believe is
22 subject to review as a clearly erroneous standard,

1 was absolutely clearly correct in concluding that
2 these declarations -- and Ms. Stetson referred,
3 for example, to paragraph 13 of the so-called
4 Bradley declaration from General Mills.

5 Here is what Bradley had to say in
6 paragraph 13. "Act 120's prohibition of the use
7 of the word "natural" on the labels of products
8 that may contain GE ingredients may also -- may
9 also necessitate changes to General Mills labeling
10 for products sold in Vermont." That's it.

11 JUDGE LYNCH: Okay. I think we
12 understand that. The District Court was pretty
13 clear about what the affidavit said.

14 Thank you very much.

15 MR. ROBBINS: Thank you, Your Honor.

16 JUDGE LYNCH: Ms. Stetson, you have
17 three minutes. We've heard a lot, and I think
18 we've gotten most of the arguments of both sides.
19 So try to, you know, keep to what's new or
20 directly responsive.

21 MS. STETSON: Certainly. So on directly
22 responsive, let me start with Zauderer and with

1 the understanding that if we're at Zauderer, we've
2 concluded that Amestoy doesn't apply, despite it
3 being the same interests supporting in the same
4 way, found wanting for the same reason. Central
5 Hudson doesn't apply, even though this doesn't
6 regulate deception and is controversial.

7 If we're Zauderer land, I want you to go
8 back and read what Mr. Robbins, the words Mr.
9 Robbins used to describe the Zauderer test.
10 Because what he is suggesting to you is that once
11 you're in Zauderer, the bottom drops out, and you
12 apply what he called a "rational basis test," and
13 you look for any legitimate state interest and you
14 look for just the idea that it might be helpful
15 without evidence.

16 Here is the problem with that. The
17 problem starts with Zauderer itself, where Justice
18 Brennan in his concurrence said I'm concurring on
19 the idea that there's no difference in the
20 standards we're talking about here.

21 The problem continues with this court's
22 decision in Hayes, where this court said in a

1 compelled disclosure case the state needs to show
2 a substantial interest. And more than that, the
3 state needs to show an actual harm, and more than
4 that, the state needs to that the measure that
5 it's putting in place actually ameliorates that
6 harm. And more than that, that it's not so --
7 that it's no more intrusive than necessary.

8 And the reason I want to pause on those
9 last two points is because of this environmental
10 issue. Judge Lynch, you, I think, put your finger
11 on the problem, which is that if we are talking
12 about a situation where the suggestion is that a
13 label on a bag of tortilla chips will somehow
14 impact the use of pesticides -- and let me be
15 clear in an aside that pesticides are used on GE
16 and non-GE crops. Commodity agriculture refers to
17 both GE and non-GE crops.

18 If we are talking about the suggestion
19 that the First Amendment is satisfied when the
20 state compels a label on a bag of tortilla chips
21 because it could have an impact on pesticides, we
22 are getting far removed even from Zauderer.

1 JUDGE LYNCH: I understand why both
2 sides would like to run away from having a trial
3 about what the real facts are here, and I
4 understand why courts would be reluctant to get
5 into that kind of trial as well. But it seems to
6 me hard to avoid the conclusion that there is a
7 big difference between a legislature legislating
8 based on real concerns about real scientific
9 problems and presenting real potential solutions
10 and one that's not.

11 And I'm not sure it's helped very much
12 either by saying -- as you put it, not he -- that
13 the bottom drops out or by saying we don't need to
14 go there. Because this court is going to decide
15 in the abstract that this is like Amestoy, and
16 they've got nothing, based on no facts at all that
17 I can see or that have been subject to the
18 crucible of cross-examination in trial.

19 Or conversely, the other way, that the
20 legislature is fine because it recited a few
21 things. I'd be reluctant to say either of those
22 things, but that seems to be what each side is

1 offering me.

2 MS. STETSON: I think, with respect to
3 the legislature saying a few things, that that is
4 what we're suggesting to you. And with respect,
5 Judge Parker, the idea that the conclusions of the
6 National Academies of Science and the American
7 Academy for the Advancement of Science and the AMA
8 and the FDA and the EPA need somehow to be vetted
9 at a factual trial is erroneous.

10 JUDGE PARKER: So what --

11 MS. STETSON: Those organizations have
12 spoken.

13 JUDGE PARKER: What do you foresee a
14 trial here looking like?

15 MS. STETSON: To be candid, and I think
16 Mr. Robbins recognized the same thing, I think
17 Judge Reiss recognizes the same thing, this is
18 largely uncharted territory. But perhaps the
19 comfort that can be taken here is this.

20 The reason that we are in this pass, at
21 this pass is because Judge Reiss did not feel
22 comfortable definitively concluding, as you can

1 tell from her opinion, what standard applies,
2 Central Hudson or Zauderer. Perhaps the best and
3 cleanest path for you to navigate is to accept all
4 the way up to Zauderer the contention that Amestoy
5 can be thrown out. Central Hudson doesn't apply.
6 Look at what Zauderer requires.

7 What Zauderer requires is a substantial
8 interest, backed up by something other than just a
9 few peer-reviewed studies -- I can find you a
10 peer-reviewed study on anything -- a reasonable
11 risk of harm manifested in some actual facts, and
12 a law that actually ameliorates the harm.

13 JUDGE PARKER: Okay. And then along
14 with that, you will go back to federal court in
15 Vermont and then do what?

16 MS. STETSON: Judge Parker, I think that
17 is for us to have to work out with Judge Reiss,
18 depending in the instructions from this court. If
19 this court concludes that there is some discussion
20 to be had in the trial court posing as a finder of
21 fact about, for example, whether -- and this is
22 the language from Zauderer-type cases, whether any

1 reasonable person could conclude that there's a
2 harm here.

3 Whether any reasonable person could draw
4 from the array of scientific evidence -- Vermont's
5 on one side, ours on the other -- that the vast
6 mountain of evidence, 2,000 studies we say that
7 show that there is --

8 JUDGE LYNCH: But you'd have to bring in
9 that mountain to an actual court and have the
10 court work its way through the mountain, which you
11 kind of don't do in the brief. You just say it's
12 all bogus.

13 MS. STETSON: No, with respect, Judge
14 Lynch, we would have to bring in an expert to talk
15 about the mountain --

16 JUDGE LYNCH: Yes, exactly. To talk
17 about the mountain.

18 MS. STETSON: -- which we have, and I
19 would actually commend this to you. If you read
20 the declarations --

21 JUDGE PARKER: The record here is
22 actually -- I found it, and I'm speaking for my

1 colleagues, it's quite interesting. But you know,
2 the opinions are completely divergent. You have
3 very powerful evidence on your side. I mean,
4 National Academies of Science and NIH and so forth
5 and so on that there's nothing much to this.

6 And then some of the amicus materials on
7 the other side cause you pause and say there might
8 be something real here. And that's what --

9 MS. STETSON: Right.

10 JUDGE PARKER: -- trials, trials resolve.
11 But I --

12 MS. STETSON: It cannot -- it cannot be,
13 Judge Parker, under even a Zauderer reasonable
14 relationship standard that a mere divergence of
15 views on a topic suffices to permit a state to
16 compel someone to speak. It has to be taken into
17 account --

18 JUDGE CARNEY: Compelling -- they're
19 compelling the disclosure of information. It's
20 true it's compelled speech. But still, the
21 disclosure of information is unlike requiring a
22 warning of some kind on the label.

1 MS. STETSON: Judge Carney, I think
2 we're past the point where we're talking about
3 whether compelled disclosure of information is
4 subject to First Amendment protection. It plainly
5 is, and this court has recognized, in fact --

6 JUDGE LYNCH: At what level? Because if
7 it -- and I guess we've kind of covered these
8 issues. So I think we've got both sides'
9 positions pretty clearly at this point.

10 Mr. Robbins, what do you want to do that
11 you're getting up? Because you're out of time.

12 MR. ROBBINS: Directly, I want to
13 clarify one thing I said. Because it turns out
14 that there is something on the font size of the --
15 and I just want the record to be absolutely clear.
16 It turns out the attorney general's regulation
17 provides that the GE disclosure must be in a font
18 size no smaller than the size of the words
19 "serving size" on the nutrition facts label
20 required by the FDA or in a font size no smaller
21 than the ingredient list and printed in bold type
22 face.

1 JUDGE LYNCH: So when that were -- I
2 don't know, how do you read that, whichever is
3 larger or whichever is smaller?

4 MR. ROBBINS: In other words, it can't
5 be smaller. It can't be smaller, but it need not
6 be larger.

7 JUDGE LYNCH: All right. Thank you very
8 much.

9 MS. STETSON: Your Honors, may I make --
10 may I make one more point on the disclosure, with
11 apologies? What Mr. Robbins said with respect to
12 the disclosure is that it needed to be visible.
13 It needs to be readily understood.

14 JUDGE LYNCH: We have -- we know what it
15 says. We know what the regulations say, and we
16 now -- he's now clarified any inadvertent
17 misstatement.

18 Thank you very much. We'll reserve
19 decision.

20 (Whereupon, the proceedings were
21 concluded.)
